COMPUTING: CREATING MEDIA- Audio Editing
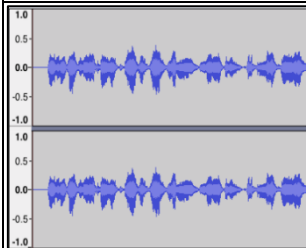

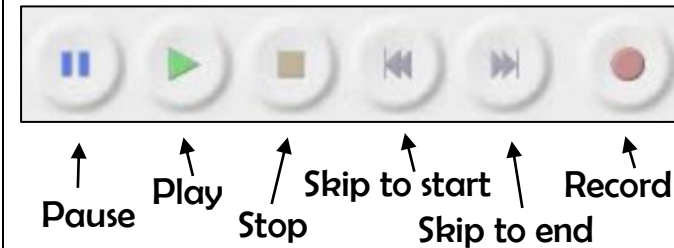

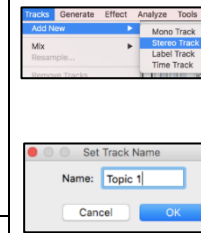

KNOWLEDGE ORGANISER

Overview

Audio Editing

-You should already know that audio means sound, including music, sound effects, and podcasts.

-The process of recording and listening to sound requires input devices (e.g. a microphone) and output devices (e.g. a speaker).

-Podcasts are a type of spoken word audio file, that can be downloaded by listeners.

-People can have ownership over audio files, and can have the audio copyrighted, so that it can't be copied without permission.

Using Software

Audacity is one example of an audio editing tool, but many others are available. For example, you can use the voice memo recorder on a tablet.
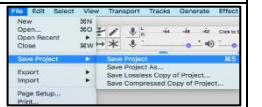

Pause   Play   Stop   Skip to start   Skip to end   Record

The sound is shown as a waveform. We should aim for it to peak at around 0.5/ -0.5

How to Record a New Track

1. Go to the tab 'Tracks' and then 'Add New.'

2. Name the new track

3. Click in the track's window to select it.

4. Press record to begin recording into the new track.

Got to the 'file' tab and 'Save Project' to save your work. You can also delete recordings, but you should only ever delete your own files!

Input and Output Devices

We use input devices to send the audio to the device/ computer.
We use output devices to listen to the audio from the device/ computer.

Input Devices	Output Devices
Microphones are input devices that change sound into electrical signals, which can then be recorded or transmitted.	Digital speakers turn the electrical signal into an audio output that can be heard by the listener.
With the help of special cables, musical instruments can be linked to computers, and become input devices.	Headphones are worn over the ears of the listener, so that only they can hear the sound output.

Some devices are capable of acting as both input and output devices. Examples include headsets, smartphones, and voice assistants (e.g. Google Home and Amazon Echo).

Creating Podcasts

Podcasts are a type of spoken word file that can be downloaded by listeners. A user can often choose to download the whole series of podcasts.

Some examples of podcasts are 'Stories Podcast', 'Six Minutes' and 'Brains On! Kids Science Podcast.'

Features of podcasts include:

Sounds: Voices, jingles, background music, sound effects

Information: Presenters' names, name of podcast, introduction, main section, conclusion.

Top Tips for High-Quality Podcasts

-Speak clearly

-Avoid fillers ('um', 'like')

-Avoid coughing/ sneezing

-Take turns to speak

-Avoid background noise

-Don't touch the microphone

-Choose music carefully
